Five Core Technologies for Brain and Body Regulation

Meet the Presenters & Collaborators

Bringing People, Ideas, and Innovation Together

At the Bioregulatory Medicine Institute (BRMI), we believe some of the most meaningful educational opportunities begin with a simple connection.

This webinar is a wonderful example.

Turul Sengul, President of BioReg, connected us with Michael Cohen, QEEG-D, founder of the Center for Brain Training and an experienced educator in neurofeedback and brain regulation.

Recognizing the natural connection between their respective fields, we welcomed the opportunity to bring these perspectives together for an educational discussion exploring technologies that support brain and body regulation.

Hosted by Dr. Tia Trivisonno, ND, LAc, MSOM, BRMI advisor, this collaboration reflects something we value deeply: bringing together knowledgeable professionals, sharing emerging ideas, and encouraging thoughtful dialogue across disciplines.

We invite you to learn more about the individuals and organizations who helped make this presentation possible.

Michael Cohen, QEEG-D

Featured Presenter | Founder & Clinical Consultant, Center for Brain Training

Michael Cohen has dedicated nearly three decades to researching the brain, neurofeedback, and human behavior. Since 1996, he has worked with children and adults experiencing a wide range of neurological, behavioral, and emotional challenges, including anxiety, ADHD, depression, trauma, and sleep disturbances.

As founder of the Center for Brain Training in Jupiter, Florida, Michael emphasizes an individualized, multidisciplinary approach that considers the many factors influencing brain function, including neurological activity, metabolic health, nutrition, and environmental influences.

An accomplished educator and author, Michael has trained thousands of healthcare professionals in neurofeedback and quantitative EEG (qEEG) brain mapping. He is the author of Neurofeedback 101: Rewiring the Brain for ADHD, Anxiety, Depression and Beyond and The Mind Rewired.

His work bridges brain science, emerging neuro technologies, and practical clinical applications, making complex concepts accessible to practitioners seeking additional tools to support their patients.

Dr. Tia Trivisonno, ND, LAc, MSOM

BRMI Host | Bioregulatory Medicine Institute

Dr. Tia Trivisonno is a naturopathic physician, licensed acupuncturist, host and emcee for the Bioregulatory Medicine Institute.

Her clinical work integrates naturopathic medicine, traditional Chinese medicine, and bioregulatory approaches, with particular interests in complex chronic illness, mental health, and the gut-brain connection.

Practicing in collaboration with Dr. Michael Gurevich at Transformational Healing Solutions in New York, Dr. Trivisonno employs a multidisciplinary approach to individuals experiencing complicated psychiatric conditions and chronic health challenges.

She has lectured internationally and contributed to professional publications exploring innovative approaches to health and healing.

Dr. Trivisonno is committed to fostering educational opportunities that encourage interdisciplinary collaboration, critical thinking, and a deeper understanding of the body's innate regulatory processes.

Her thoughtful moderation helped connect the technologies discussed during this webinar with the broader principles of holistic and bioregulatory medicine.

Turul Sengul

Special Guest & Collaborator | President, BioReg

Turul Sengul is President of BioReg and founder of BioReg Technologies, specializing in advanced Pulsed Electromagnetic Field (PEMF) technologies and bioregulation systems.

With more than two decades of experience in PEMF device development and clinical implementation, Turul works to make European-engineered bioregulation technologies accessible to healthcare professionals and individual users.

BioReg offers advanced four-channel PEMF and bioregulation therapy systems designed for licensed practitioners in mental health, chiropractic, and integrative medicine. The company also provides portable and home-use systems for individuals interested in these technologies.

BioReg's approach focuses on the use of precisely controlled electromagnetic signals and biofeedback-based technologies, with an emphasis on the body's

regulatory processes and bioelectrical communication.

Turul also played an important role in bringing this webinar to life. By introducing BRMI to Michael Cohen, he helped create an opportunity to explore the complementary fields of neurofeedback, PEMF, and bioregulation through a shared educational platform.

We are grateful for his initiative, generosity, and commitment to fostering connections that advance learning and collaboration within the integrative healthcare community.

The Value of Connection

What began with a thoughtful introduction became an opportunity to share knowledge, explore complementary technologies, and open new conversations about brain and body regulation.

We extend our sincere appreciation to Michael Cohen for sharing his extensive knowledge and experience, to Turul Sengul for making this connection possible and contributing his expertise, and to Dr. Tia Trivisonno for guiding the discussion.

At BRMI, education is about more than sharing information. It's about connecting people, perspectives, and possibilities.

We hope this presentation inspires further curiosity, collaboration, and exploration.
